Coping with the challenges of global economic governance is a topical issue of the current international agenda, and the object of a vivid debate among scholars and policy-makers. The international financial and economic crisis that erupted in 2007 reveals the fallibility of the neoliberal paradigm that has dominated the world economic landscape for the last quarter of a century; regulatory and supervisory institutions have disclosed their weaknesses, and markets have shown their limits in dealing with the rational allocation of risks, and their lack of resilience to shocks. This book offers a comprehensive view of this matter, examining the dialectic and fluid relations between State sovereignty, supranational rules and the role of markets. The opportunity to deal with economic and regulatory challenges through the lens of legitimacy and effectiveness is the fil rouge of the co-authors' original contributions and the inner-sense of the book. This critical perspective results particularly in investigating gaps and ambiguities of the institutional framework currently underpinning the major international economic organisations

(IMF, WTO, G20, EMU), in re-discussing the State's regulatory role in coping with the challenges of the global economy, and in studying the contradictory interactions between financial paradigms and sustainability with regards to economic development policies.

With the rise in the number of mergers and acquisitions taking place in today's business environment, there will undoubtedly be a rise in the number of bankruptcies. Completely updated, Bankruptcy and Insolvency Accounting, Seventh Edition, Volume 2 updates the most recent forms and exhibits as a result of the new Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 (BAPCPA). The process of turning around a

troubled business and restructuring its financial aspects is thoroughly described for controllers, CEOs, CFOs and CPAs with small businesses as clients.

This book focuses on CSR in the public sector, in all its manifestations around the world, in order to consider its application in practice and its connections to sustainable objectives. This book is unique in that all chapters were written by members of the Social Responsibility Research Network. Their ideas have been tested and refined through the feedback given after they were presented at the 16th International Conference. The approach used in this book is based on the tradition of the Social Responsibility Research Network – a worldwide body of scholars that, over its 20-year history, has sought to broaden the discourse and to treat all research as inter-related and business-relevant. The book examines diverse aspects of how CSR and sustainability apply to, and are applied by, a variety of public bodies in a variety of ways. Thus, the authors focus on the priorities of these organisations, in order to consider the extent to which the focus has changed so much that we need to think about new approaches to our understanding of CSR and sustainability and differing effects in practice. The international mix of authors makes this an original contribution, sharing some of the best ideas from around the world

Ticking Time Bomb. Between 1946 and 1990, on the order of 754,975 tons (over 1.5 billion pounds or 684 million kilograms) of chemical weapons were disposed in European waters. At least 21 European Nations are now potentially at risk because of the expected toxic effect on marine life and the food chain. Critical research revealed in over 400 print pages contains 111 images including 23 declassified TOP SECRET, SECRET, CONFIDENTIAL, and RESTRICTED documents, 40 photographs, and 17 maps. Principal Chapters: - Evolution of Plans for the Disposition of Captured Chemical Weapons - Accounting of All Captured Chemical Weapons - Accounting of All Sea-Disposed Chemical Weapons - Locations of the Scuttled Ships - Estimated Total Chemical Warfare Agents Disposed in European Waters - Legal Responsibilities of States - Conclusion and The Imperative for an International Strategy "Bottom Line": The environmental and public health problems facing European nations incident to the anticipated release of potentially massive amounts of slowly hydrolyzing nerve and blister agents into the marine environment are more critical and urgent than generally supposed. Increased incidents of human and marine injury in recent years have convinced many the threat of chemical poisons leaking from the deteriorating shells, canisters, and containers on the ocean floor is an imminent and insoluble problem. The

fundamental premise of this study is that when the these sea disposals occurred, dumping of toxic CW into the ocean was the preferred disposal method and was not an act of malevolence or ill will. Such dumping was not prohibited and the effect on the environment was simply not considered important at that time. It is therefore not the intent of this book to affix blame or culpability. Rather, a detailed analysis of principal findings underscores the imperative for an international strategy and a proposal for international collaboration and cooperation in addressing the potential problem is advanced.

Innovation in information and communication technology (ICT) fuels the growth of the global economy. How ICT markets evolve depends on politics and policy, and since the 1950s periodic overhauls of ICT policy have transformed competition and innovation. For example, in the 1980s and the 1990s a revolution in communication policy (the introduction of sweeping competition) also transformed the information market. Today, the diffusion of Internet, wireless, and broadband technology, growing modularity in the design of technologies, distributed computing infrastructures, and rapidly changing business models signal another shift. This pathbreaking examination of ICT from a political economy perspective argues that continued rapid innovation and economic growth require new approaches in global governance that will reconcile diverse interests and enable competition to flourish. The authors (two of whom were architects of international ICT policy reforms in the 1990s) discuss this crucial turning point in both theoretical and practical terms.

and TV recommendations, IBM's Watson triumphed on Jeopardy over puny human brains, computer programs can be trained to play Atari games. But how do all these things work? In this book, Sean Gerrish offers an engaging and accessible overview of the breakthroughs in artificial intelligence and machine learning that have made today's machines so smart. Gerrish outlines some of the key ideas that enable intelligent machines to perceive and interact with the world. He describes the software architecture that allows self-driving cars to stay on the road and to navigate crowded urban environments; the million-dollar Netflix competition for a better recommendation engine (which had an unexpected ending); and how programmers trained computers to perform certain behaviors by offering them treats, as if they were training a dog. He explains how artificial neural networks enable computers to perceive the world—and to play Atari video games better than humans. He explains Watson's famous victory on Jeopardy, and he looks at how computers play games, describing AlphaGo and Deep Blue, which beat reigning world champions at the strategy games of Go and chess. Computers have not yet mastered everything, however; Gerrish outlines the difficulties in creating intelligent agents that can successfully play video games like StarCraft that have evaded solution—at least for now. Gerrish weaves the stories behind these breakthroughs into the narrative, introducing readers to many of the researchers involved, and keeping technical details to a minimum. Science and technology buffs will find this book an essential guide to a future in which machines can outsmart people.
