When he recovers, the disoriented Doctor looks in a mirror and sees the face of a stranger. He knows only that he is called "the Doctor" -- nothing more. But something deep inside tells him to trust the TARDIS, and his hands move over the controls of their own accord. The TARDIS takes him to a strangely familiar junkyard in late-nineties London, where he is flung into a confrontation between local drug-dealers and Samantha Jones, a rebellious teenage from Coal Hill School. But the Doctor soon finds the TARDIS transporting him to various other places in order to recover all of his memories -- and that involves seeing seven strangely-familiar faces."--Page 4 of cover.

The universe is at war. Action takes courage. The TARDIS is ensnared in a time corridor, catapulting it into derelict docklands on 20th century Earth. The Doctor and his

companions, Tegan and Turlough, stumble on a warehouse harbouring fugitives from the future at the far end of the corridor – and are soon under attack from a Dalek assault force. The Doctor's oldest enemies have set in motion an intricate and sinister plot to resurrect their race from the ashes of an interstellar war. For the Daleks' plans to succeed, they must set free their creator, Davros, from a galactic prison – and force the Doctor to help them achieve total control over time and space. But the embittered Davros has ideas of his own... 35 years after its first TV transmission, Doctor Who fan-favourite Resurrection of the Daleks is novelised at last, by the author of the original script, Eric Saward.

'Seamlessly melding scholarship with passion, Unwell Women is the definition of unputdownable' Telegraph 'A richly detailed, wide-ranging and enraging history... Unwell Women is not just a compelling investigation, but an essential one' Observer 'A passionate and indignant history' The Times 'A searing, brilliant investigation, an intricate and urgent book on how women's health has constantly been misunderstood and miscast throughout history' Kate Williams 'One of the most important books of our generation' Fern Riddell

'UNWELL WOMEN is a powerful and fascinating book that takes an unsparing look at how women's bodies have been misunderstood and misdiagnosed for centuries.' Lindsey Fitzharris 'We are taught that medicine is the art of solving our body's mysteries. And as a science, we expect medicine to uphold the principles of evidence and impartiality. We want our doctors to listen to us and care for us as people, but we also need their assessments of our pain and fevers, aches and exhaustion to be free of any prejudice about who we are, our gender, or the colour of our skin. But medicine carries the burden of its own troubling history. The history of medicine, of illness, is a history of people, of their bodies and their lives, not just physicians, surgeons, clinicians and researchers. And medical progress has always reflected the realities of a changing world, and the meanings of being human.' In Unwell Women Elinor Cleghorn unpacks the roots of the perpetual misunderstanding, mystification and misdiagnosis of women's bodies, and traces the journey from the 'wandering womb' of ancient Greece, the rise of witch trials in Medieval Europe, through the dawn of Hysteria, to modern day understandings of autoimmune diseases, the menopause and conditions like endometriosis. Packed with character studies of women who have suffered, challenged and rewritten medical orthodoxy - and drawing on her own experience of un-diagnosed Lupus disease - this is a ground-breaking and timely exposé of the medical world and woman's place within it.

Two world-leading doctors reveal the true state of modern medicine and how doctors are letting their patients down. In Hippocrisy, rheumatologist and epidemiologist Rachelle Buchbinder and orthopaedic surgeon Ian Harris argue that the benefits of medical treatments are often wildly overstated and the harms understated. That overtreatment and overdiagnosis are rife. And the medical system is not fit for purpose: designed to deliver health care not health. This powerful exposé reveals the tests, drugs and treatments that provide little or no benefit for patients and the inherent problem of a medical system based on treating rather than preventing illness. The book also provides tips to empower patients – do I really need this treatment? What are the risks? Are there simpler, safer options? What happens if I do nothing? Plus solutions to help restructure how medicine is delivered to help doctors live up to their Hippocratic Oath. 'One of the hardest things for a doctor to do ... is nothing. This superb book explains how in medicine and surgery less is often not just more, it's closer to the oath we're all supposed to practise by.' — Norman Swan, award-winning producer and broadcaster of the Health Report and Coronacast 'This eye-opening and enthralling book on the medical and moral hazards which beset the health profession is a must-read for patients and practitioners alike. From 'tooth-fairy science' to medical disasters to the inflated business world of medicine, Hippocrisy is a profoundly thought-provoking and compelling work that challenges our perception of the practice of modern medicine.' — Kate McClymont AM, award-winning investigative journalist for the Sydney Morning Herald/The Age 'Doctors are educated to do good. Yet, as the commercial imperatives of the medical industrial complex tighten their grip, doctors are becoming more and more worried that they are inflicting harm rather than creating benefit. This book is for them and, perhaps even more importantly, for their patients. The road to hell is paved with good intentions: read Hippocrisy and turn back.' — Iona Heath CBE, former President, The Royal College of General Practitioners 'This brilliant book offers clear and compelling evidence that we're all at risk from too much medicine. Using the best of science, these two respected doctors blow the whistle on harmful healthcare. Buchbinder and Harris reveal how overdiagnosis, overtreatment and the medicalisation of normal life are major threats to human health. But this brilliant book also brings hope that we can wind back the harm and waste of unnecessary tests and treatments, and focus more on the great benefits medicine has to offer.' — Ray Moynihan, author of Too Much Medicine? and Selling Sickness, Assistant Professor, Bond University 'About half of us in advantaged countries are now patients or 'providers', or both, and a third of clinical interventions are futile at best. Seeking health is daunting and we could benefit from a guide. Rachelle Buchbinder and Ian Harris have provided such with this volume.' — Nortin M Hadler, author of The Last Well Person, The Citizen Patient and Worried Sick, Emeritus Professor of Medicine and Microbiology/Immunology, University of North Carolina 'Throughout medical history, doctors have routinely ignored the fundamental Hippocratic

injunction: 'First, do no harm'. Most of their treatments produced lots of harms, with little or no benefit. This wonderful book punctures the hyped claims of modern medicine, showing that it is not nearly as scientific, safe, effective, and honest as it should be. Reading Hippocracy is essential for doctors (to help make them become more cautious); but even more essential for patients (to help them become more self-protective).' — Allen Frances, author of Saving Normal, Professor and Chairman Emeritus of the Department of Psychiatry and Behavioral Sciences, Duke University School of Medicine 'A timely book from two leading doctors. They present evidence that despite medicine's lip-service to evidence-based medicine, many unnecessary, wasteful and harmful investigations and treatments abound. Increasingly, the healthy are re-defined as having 'predisease' and drawn into questionable investigations and monitoring programmes. The book's core message is that medicine's hubris and a creeping scientism has come to overshadow the doctor's commitment to care for and comfort their patients and, above all, do no harm. It is time to step back from the brink and revisit the founding principles and core values of our profession.' — Trish Greenhalgh OBE, Professor of Primary Care Research, University of Oxford
